

socket

--socket.gethostbyaddr(host)

--socket.gethostbyname(name)

--socket.gethostbyname_ex(name)

socket.gethostbyname() 加强版

FE:

```
>>> from socket import *
```

```
>>> gethostbyname('www.baidu.com')
```

```
'61.135.169.125'
```

```
>>> gethostbyname_ex('www.baidu.com')
```

```
('www.a.shifen.com', ['www.baidu.com'], ['61.135.169.125', '61.135.169.121'])
```

--s = socket.socket()

套接字对象

--s.connect((ip, port))

--socket.setdefaulttimeout(secs)

超时会报错
